
Dorgard

Wedging open fire doors is illegal and dangerous. Dorgard is the wireless, legal and cost-effective solution.

Inexpensive to buy, Dorgard requires no wiring as the unit is battery operated and is fitted to the bottom of the fire door using 4 screws.

We've all seen or done it before! A fire door wedged open on a hot sunny day or the fire door propped open so that people can easily pass, however it is illegal and dangerous to do this, in fact it is a direct contravention of Fire Safety regulations in the UK. In the event of a fire, this hazardous practice will result in the fire spreading quicker, putting people's lives at risk and causing more damage.

Dorgard enables you to legally and safely keep fire doors open, by allowing the door to close when the fire alarm sounds preventing the spread of fire and smoke. Installed onto the bottom of the fire door in under 5 minutes, Dorgard is listening for a continuous fire alarm of 65dBA or higher.

Features:

- Wireless unit with fail-to-safe technology
- Improves access throughout buildings in line with the Equality Act 2010
- Complies with BS EN 1155 and accepted by the Fire and Rescue Services
- Available in a variety of colours and finishes
- Automatic night-time release facility
- Complies with BS 7273-4 category C
- Adjustable sensitivity
- CE marked

Dorgard can also be leased, the cost of which includes installation, annual servicing and full warranty for the term of the contract.

As with all fire safety devices, a Fire Risk Assessment should be carried out prior to installation.

The Dorgards did a brilliant job in closing the fire doors. The corridor concerned was compartmentalised as a fire zone so only five residents' rooms were affected. The Fire Inspector commended the activation of the Dorgards and following the Inspector's recommendations, we intend to install units on all our resident's doors, in addition to the corridor fire doors.'
